

Point of Sale Just Got Easier!

Imagine a flexible, yet simple POS application with the versatility to power retail, service and rental operations right out of the box — Proxis Store Manager does it all!

Store Manager software supports a wide variety of transaction, payment, & pricing options for single-store operations:

- Consignments
- Layaways
- Rentals with auto check-in
- Gift cards
- In-house accounts
- Work orders
- Integrated credit card processing
- Tax-exempt transactions
- Food stamps
- Employee commissions
- Item discounts
- Transaction discounts
- Quantity pricing
- Customer pricing
- Multiple departments

Powerful, Feature-rich & User-friendly

Store Manager's unlimited product database, intuitive lookups, reporting and back office modules provide the foundation for successful operations.

Look up products manually by SKU, Product Code or Description, or simply use a handheld scanner to scan barcoded items at the point of sale. Search for existing customers by Name, Company, or Customer Code.

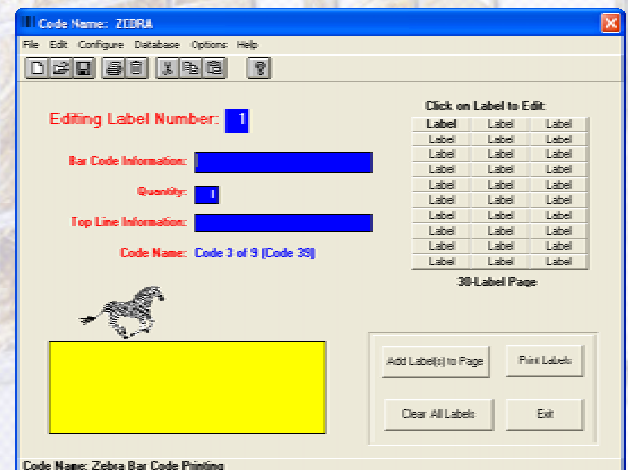

Integrated, customizable reporting ensures access to critical business data whenever you need it. Back Office Accounts Receivable and Inventory Management functionality allows control over billing and purchasing.

Built-in Barcode Label Generation

With Store Manager's built in barcode software, *Code Name: Zebra*, creating scannable item tags is fast and simple.

Code Name: Zebra supports printing of Code 39 (Code 3 of 9) barcodes using the product information contained in the Store Manager product database.

Print labels on any standard 8½ by 11 inch label stock (30 or 80 labels per page) right to a full-sized desktop laser or inkjet printer. Label inventory, then scan and tender for improved accuracy and faster service at the point of sale.

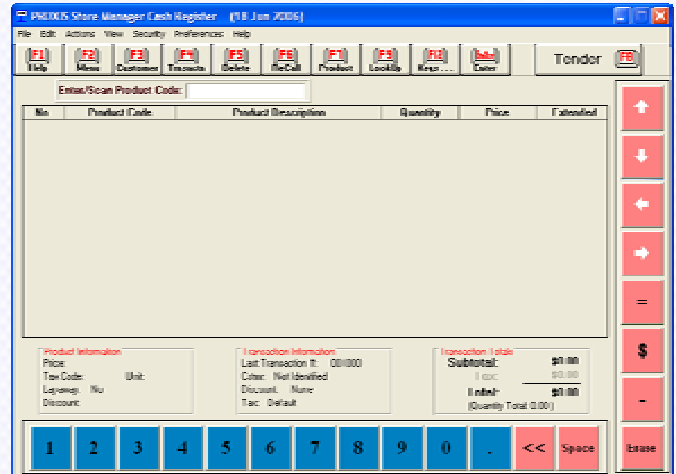

Dedicated to Compatibility

Store Manager features a user interface for both touch screen and traditional monitors built right in, eliminating the need for duplicate versions or costly upgrades if your hardware changes.

Store Manager is certified for use with a variety of popular receipt printers, pole displays, monitors, scanners, card readers, and cash drawers.

Integrate PC Charge or X-Charge software for convenient, Internet-based credit card processing.

SQL and MS Access compatibility permits data integration between Store Manager's database and other important business applications. A Quickbooks interface creates files for import directly into Quickbooks General Ledger accounts.

SYSTEM REQUIREMENTS

- Any Pentium Class or better computer
- 64MB RAM (128MB or better preferred)

SUPPORTED OPERATING SYSTEMS

- Windows 98, 2000, XP Home & Pro

SUPPORTED RECEIPT PRINTERS

IMPACT PRINTERS
